Simon Torell - Reflections week 2

What do I want to learn or understand better?

So after this week we have gotten off to a good start as a group and decided that people should mostly focus on getting familiar with flutter during easter. I think this is a good idea because I do not yet feel 100% familiar with it and the few in the group who had previous experience with the software have given the rest of us a few tips as well as links to some videos. I also want to understand the workflow better when it comes to working agile. I might have to read some of the provided material in the course to get a better understanding and be ready to get going after easter.

How can I help someone else, or the entire team, to learn something new?

I think that during this week, me explaining what a business model canvas was is the biggest help I have been able to give. Going forward, I think that the best way I can contribute to the whole team is to make sure I am ready to start coding when the time comes after easter. Furthermore I think that me being vocal about how we should structure the meetings, with the usage of a meeting leader, was a good thing. Going forward I hope this will make our meetings more efficient.

What is my contribution towards the team's use of Scrum?

This week has not really had a lot done in terms of Scrum. We have just started to sort out the project itself, writing the scope and started to think about the user stories and tasks. Some of the group, not me, were chosen to have a first meeting with the stakeholder either friday 3/4 or monday 6/4 to talk about what's important to the application we are to develop. So the thing I have to continue to think about is the user stories, which I think will be easier once the meeting with the stakeholder has been conducted.

What is my contribution towards the team's deliveries?

My contribution this week was that I explained what a business model canvas was. Furthermore the best thing I can do at this point is to learn flutter as best I can to be ready after Easter to start coding. Furthermore I have been trying to be vocal about the fact that we can't make up values for the customer because some of our discussions in the group went towards that direction. I hope that the ones who were assigned to do the meeting took it to heart so they can have a good initial meeting.
