Simon Torell - Reflections week 3

What do I want to learn or understand better?

Since it was a shorter week I did not get around to learn more about Firebase. After this sprint I do think that it would have helped me to a certain degree. Furthermore there are some widgets that I probably should know a bit better to in turn be able to use them more efficiently.

How can I help someone else, or the entire team, to learn something new?

I think I fell a bit short this week on asking questions when I did not understand something. Furthermore I did ask questions some time but the ones I programmed with just brushed it off and moved on. I think I should have stood my ground and pushed on the understanding part. This in turn would force me and my coding team to learn more. I feel that we sometimes just google widgets and implement them which we then don't REALLY understand. This bites us in the back after a while when we have to refactor these widgets.

What is my contribution towards the team's use of Scrum?

I've been the one making sure we move tasks accordingly in the scrum board. In addition to this I have been making sure that my group types in their values for our KPIs after each programming session.

What is my contribution towards the team's deliveries?

I have been working the tasks provided to the group. I feel that my role has been more shaped into a reflection role. I've been trying to articulate on what we actually do to proceed with tackling a task and in what order things should be implemented. Furthermore this sprint we switched it up so I was the one writing the code more which was a welcome change of pace.
